

### Case Study I (for lesson 1 and 2)

B/O Asha is Day 1 weighs 1855 gram, born by normal vaginal delivery to a second gravida at 35 weeks. Baby cried at birth and there is no **respiratory distress**. Mother is confident in taking care of the baby.

1. Will you bring baby to NICU or keep with mother ?
2. How will you promote exclusive breast feeding ?
3. Mother complains of inadequate breast feeding; how will you manage her? Should you start the infant on formula feeds?
4. What should be the amount to be given to the baby if the clinician takes a decision of feeding the baby with spoon on day 4?
5. Mother complains of sore nipples on D 5. How will you help the mother?
