

Case study III (Lesson LBW)

B/O Sasha, 36 weeks 2100 gms is born to a primi-gravdia. The baby cried immediately at birth and has no respiratory distress. The baby is along with the mother in postnatal ward.

What are the important concerns that you have in this late (borderline) preterm infant?

How will you ensure exclusive breast feeding in this infant?

The baby is planned to be discharged home on day 6; what vaccinations you will give.
Enumerate steps of counseling to mother?

Will you supplement any minerals / vitamins to this baby in addition to breast milk; if Yes when & what ?

Please post your comments!!
